

# Business Intelligence Developer Analyst

SRVR has several international telecommunications clients for which we provide full-scale services including telemarketing, customer service, website development, accounting, regulatory management, long-term strategy, and other assistance with day-to-day operations. We are currently looking for a Business Intelligence Developer Analyst for our Schaumburg, IL office.

**Position Summary:** The position requires a strong proficiency in the Microsoft Business Intelligence stack, including the relational SQL engine, Integration Services, Analysis Services, and Reporting Services. Candidates should be prepared to discuss the most-frequently used methodologies for data warehouse design, subsystems for ETL, and design considerations for multidimensional databases. Experience writing and tuning complex MDX is helpful. Strong business analysis skills are required. Candidates should have a successful history of analyzing and documenting business needs, identifying potential solutions, and developing an argument for one solution over all others. Strong written and oral communication skills are required.

Responsibilities will include consulting with internal and external clients to model complex financial data structures using data modeling tools. Requirements gathering for feature enhancements will be ongoing and will provide significant client exposure. The Business Intelligence Developer Analyst will also assist to educate clients on best practices for reengineering their risk processes. Documentation, designing and tests will also be a part of the team member's work load. The candidate is expected to have experience as a lead with deep skills in various reporting tools and data warehousing.

## Requirements:

- Bachelors in Computer Science, Engineering, Information Systems or Finance.
- Experience and knowledge of various development processes and the software development lifecycles is helpful.
- SQL Server (2005, 2008R2, or 2012)
